

Levello is a UK manufacturer of Lighting and Ceiling Accessories. Their unique magnetic fixing system gives Designers, Installers and Homeowners unparalleled flexibility with their lighting installation.

The Challenge

To continue setting themselves apart from their competitors and stay consistent in delivering high quality products, Levello were looking to improve the quality management systems to increase productivity and aid their company growth. The implementation of the new quality system and processes is essential in meeting their client requirements and legal demands within the industry.

The Solution

Mohammed Parveys, an Electronic Engineering graduate from the University of Bedfordshire, designed and implemented a new Quality Engineering System, establishing a leaner and more efficient manufacturing process throughout the whole business.

The Outcome

Following the successful collaboration with Mohammed, Levello offered him a permanent job leading the Quality Assurance function. In addition to the increased productivity, Levello have reduced their manufacturing waste thus lowering their carbon footprint. Mohammed also worked on two new product developments taking them forward right from inception.

"I would highly recommend Time2Grow programme, as it helps to bring qualified graduates into the real-world working environment, to assist companies with their business growth."

Roger Piepenstock,
Managing Director

"Time2Grow has given me an opportunity to develop the skills gained through my studies in a commercial setting, as well as learn new ones."

Mohammed Parveys, Electronic Engineering Graduate
